

Here's the easy way to find the **FACTS** about the **GRAVELY**—

Ask Your Neighbor

**He Knows—he'll tell you the
FACTS about GRAVELY Performance**

No one can tell you the qualities of the GRAVELY Tractor and its attachments better than the man who uses one. On the following pages we proudly present the names and addresses of GRAVELY owners in our territory. There are over 100 of them . . . one of them is bound to be your neighbor. Ask him. Watch him at work with the GRAVELY Tractor, and you will be convinced that here is the finest machine of its kind in existence. We like to be honest about our machine, but when we are people think we are allowing our enthusiasm to run away with us. No machine could be that good, they say, but it is—and we ask you to **ASK YOUR NEIGHBOR**. He'll tell you the **FACTS** about GRAVELY performance! Here is another fact. We have a large backlog of orders. Not because we are producing so few tractors, but because so many discriminating buyers are demanding the best, the **GRAVELY!** We have the best 5-horsepower Tractor on the market, and the lowest priced! The price of the GRAVELY Tractor has advanced only 5% during the past nine years, yet the quality has improved. **Ask Your Neighbor!**

PORTLAND 14, OREGON

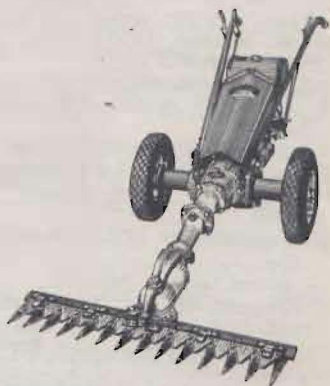

Your plowing can be done easier, quicker, more economically with a **GRAVELY Rotary Plow Attachment** for your **GRAVELY Tractor**. This Rotary Plow is power driven, independently from the wheels of the Tractor, especially designed and manufactured for the **GRAVELY Tractor** by **GRAVELY Engineers and craftsmen**. It will pulverize the ground to just the right consistency, neither too fine or too lumpy, making a seedbed that is smooth, level, ready for planting. It will plow from 7 to 10 inches deep and make a furrow from 10 to 12 inches wide, depending on soil conditions. It is easily and quickly adjusted to any desired depth or width, and cuts up weeds, trash and fertilizer, mixing them thoroughly with the soil. A safety slip clutch protects your transmission and drive gear if you hit anything larger than twice the size of your doubled fist. Anything smaller will be thrown out by the special tips on the cutter blades. You have a choice of high speed or low speed, insuring successful plowing in even the roughest of soil. Ask Your Neighbor!

If the GRAVELY Sickle Mower Attachment won't cut it, then you'll have to use an axe. Head-high grass, weeds, even locust sprouts as big around as your thumb are no trouble for the GRAVELY. It is especially adaptable for mowing along fencerows, getting into corners or under overhanging branches, because the GRAVELY has a reverse . . . a motion of your hand and you back out under your own power!

The **GRAVELY** Tool Holder and cultivating steels shown here have proved their worth to thousands of satisfied users over many years. You may obtain the steels in any size from 1½ to 3 inches. The attachment is on the front of machines, you can see what you are doing, and do your cultivating with ease and pleasure.
